

EVERYWHERE HUB

SAFE—CONNECTED—PRODUCTIVE

SITUATIONAL MANAGEMENT OF PEOPLE AND ASSETS AND IN REAL TIME

Constant tracking and secure communications among your remote personnel and operations management team enables you to manage your resources EVERYWHERE. The EVERYWHERE Hub a comprehensive back-end solution for monitoring, operating, and managing your workers, as well as your assets, using robust geospatial data.

The EVERYWHERE Hub is purpose built for your firm's asset tracking and management—both for day-to-day operations and for emergency response in situations where personnel recovery and search-and-rescue operations are required. The Hub provides real time situational awareness and asset tracking by consolidating position, status, and message information, and enables communication with two-way capable units in the field.

The Hub provides a complete hierarchical operating picture of all of your devices. You can send messages to one or more team members, view individual and team tracking data, obtain information on device status, and remotely configure specific devices. In emergency situations, you can easily identify your closest assets and deploy them efficiently.

Remote workers in distress can activate the SOS button on their device, triggering an alert that is delivered to your designated monitoring center, or to the EVERYWHERE Communications Monitoring Center.

KEY FEATURES

- Multi-device, Multi-network Support*
