EVERYWHERE COMMUNICATIONS
ALWAYS CONNECTED

EVERYWHERE APP

SAFE—CONNECTED—PRODUCTIVE

THE APP FOR PEOPLE WHO WORK EVERYWHERE

The EVERYWHERE Smartphone App is an Android and iOS application purpose built for enterprise and government entities with employees on the go. The App operates in standalone mode in Wi-Fi or cellular environments, or it may be paired via Bluetooth with the EC-100 to provide global connectivity and communications.

The App provides EVERYWHERE customers individual and team situational awareness via a mapping overlay. In addition, the App provides chat with internal users and global text and email. Users in distress can activate a two-step SOS mode to summon emergency assistance.

When paired, the App extends communication and tracking globally, and can also be used to update configuration settings and to create the personality of the paired EC-100. The App supports EVERYWHERE's Intelligent Routing platform, leveraging the most efficient network for communications back to the EVERYWHERE Hub.

KEY FEATURES

Global SOS

Intelligent routing

Chat with team members and dispatchers

Broadcast messages

Situational awareness

Pulse – Are you OK?
